HR Analytics & Employee Performance Tracker (2026)

Project Overview

This project is a comprehensive **HR Management Tool** developed using **Microsoft Excel 2007**. It is designed to help HR professionals and managers track employee performance, analyze salary distributions, and identify potential attrition risks within an organization.

The analysis is based on a dataset of **50 employees** across two key regions: **Indore and Udaipur**.

Key Features & Insights

Interactive Dashboard: A clean, grid-free visual interface featuring key performance indicators (KPIs).

Attrition Risk Analysis: A logical system that identifies "High Risk" employees (12%) based on low . performance and high leave frequency

Regional Workforce Distribution: Balanced insights showing a **52% (Indore)** and **48% (Udaipur)** employee split.

Department-wise Payroll Tracking: Deep dive into salary costs, identifying **IT** as the highest expenditure department.

Performance Metrics: Real-time tracking of the average employee rating, currently at **3.86/5.0**.

Technical Implementation (The "Backend" Logic)

Data Structuring: Managed raw employee data including IDs, Departments, Joining Dates, and Performance Scores.

Advanced Formulas:

Attrition Logic: Used IF(AND()) functions to flag critical staff.

Salary Bracketing: Categorized employees into High, Mid, and Low salary groups.

Pivot Tables: Automated data aggregation for regional and departmental summaries.

Data Visualization: Utilized Clustered Bar Charts, Pie Charts, and Doughnut Charts optimized for Excel 2007.

Tools Used

Microsoft Excel 2007 (Core Analysis & Visualization).

Pivot Table Engine (Data Summarization).

Logical Functions (Predictive Analysis).
